

Rubber Band Trade Setup

There are many trade setups which called the rubberband set up, I've seen and read them for forex, stocks, futures, options, each one a bit different, requiring different conditions, times of the day, volume etc, it gets quite complicated.

How would you like to learn a universal rubberband trade setup which can be used on:

- All trade types - Stocks, Forex, Currencies, Futures, Bonds
- All trade time frames - weekly, daily, hourly, 10 minutes etc

And...

- Only uses simple indicators
- Has a very high success rate

I learnt this trade setup from my trading mentor, Dr Barry Burns, I could try and explain it to you here on this web page but quite frankly I probably could not do it justice. But in fact there's no need because you can watch a very detailed explanation on video, with all the settings and conditions required, get all the info on this very high probability trade setup here - <http://www.topdogstrader.com/free>
